

ATIS Wheel press release:

The ATIS Wheel™

The ATIS Wheel™ is a mechanical device designed to help the airplane pilot record all ATIS information by presenting the data as a graphic depiction. The ATIS Wheel™ is presented on a 5.5" x 8.5" rectangular durable format with seven individual 1.5" wheels positioned about the perimeter of the device along with two 3" concentric wheels positioned in the center. Each wheel's topic coincides with the sequential information reported in the airport terminal area's ATIS broadcast.

Once the information is entered onto the ATIS Wheel™, this displayed information is now available to the pilot for continued reference without the possibility of transcription error or forgetting the pertinent ATIS data. (It is recommended that the pilot listen to the pre-recorded ATIS information twice to verify that the correct information has been entered on the ATIS Wheel™.)

The ATIS Wheel™ information follows the sequential presentation of the ATIS information, providing the pilot with the following data:

- The ATIS information phonetic letter identifying this specific ATIS report, named sequentially after a phonetic letter of the alphabet.
 - Example: This is Providence ATIS information ALPHA.
- The time the ATIS information was recorded - in ZULU (GMT) time.
 - Since all ATIS information should be current, there is no wheel on the ATIS Wheel™ PRO to record the ZULU time.
- The DIRECTION from which the wind is blowing.
- The VELOCITY of the wind and WIND GUSTS, if any.
- VISIBILITY and SKY condition.
- The CEILING of the sky (if any) and cloud height, if OVERCAST.
- The TEMPERATURE and DEW POINT.
- The RUNWAY in use for LANDING and TAKEOFF.
- The instrument APPROACH in use for landing.
- The BAROMETRIC pressure, in order to calibrate the altimeter additional tower comments (e.g. notice of closed taxies, etc.)

The ATIS Wheel™ also displays clearly the visual relationship between the wind direction and the active runway, informing the pilot as to the pending cross wind takeoff and landing situation.

The ATIS Wheel™ is conveniently sized to fit in a standard Jeppesen® binder for easy reference.

Also available - The ATIS Wheel™ PRO is presented on a 3.5"x 5.5" rectangular format that fits conveniently in a shirt pocket for quick and easy reference. The PRO does not have wind velocity, visibility or take-off/landing wheels and is designed for the professional pilot who has been adequately briefed and who wishes to be reminded of the essential ATIS information for takeoff and landing.

The ATIS Wheel™ is manufactured by Carl Dworman, LLC * Ayala Suite * 3057 Cornelia Drive * Jacksonville, FL 32257 * Telephone (787) 422-2708.

For information on how to order your ATIS Wheel™ and ATIS Wheel PRO, go to <http://www.ATISWheel.com>.
